

Food Manufacturing and Distribution

for Microsoft Dynamics NAV

To-Increase Food Manufacturing and Distribution for Microsoft Dynamics NAV is a complete management solution for companies that produce and distribute food items. The solution extends Microsoft Dynamics NAV with the process manufacturing, compliance, quality control, finance management, distribution management, and other capabilities that food companies require to manage their operation. To-Increase Food Manufacturing and Distribution works in full integration with Microsoft Dynamics NAV, so information and capabilities are always available to users, who navigate within a unified, comfortable software environment.

Throughout the operations and processes of food production and distribution, To-Increase Food Manufacturing and Distribution maintains complete transparency of such values as quality measures, finance data, and all item-related information. The solution provides full lot traceability with forward and backward tracking of all events. With powerful quality assessment and tracking capabilities in addition to effective reporting and immediate availability of needed information, To-Increase Food Manufacturing and Distribution supports your compliance efforts and helps you meet regulatory, industry, and corporate mandates and standards with great efficiency. It maintains full histories of quality assessments, lots, equipment and facilities, and other elements of your production and distribution.

To-Increase Food Manufacturing and Distribution supports you in creating productive relationships with customers and trading partners. Throughout distribution, finance management, and production, there are numerous junctures where you can ensure optimal service quality and alignment with your goals for managing profitable accounts and achieving the best value from vendors. It also provides you with the capabilities to keep equipment and facilities in the best working conditions, so you can focus your operation on uninterrupted productivity.

Features

Process manufacturing	Effectively plan and manage batch production with end-to-end lot traceability; control materials, inventories, equipment, and costs; and manage products in groups based on recipes.
Quality control	Perform testing to verify the quality levels of materials and products, with full lot and sub-lot histories, and in integration with your production and business management processes.
Maintenance management	Manage equipment and facilities to be in optimal working conditions, and efficiently procure materials and parts in a timely manner and at advantageous conditions.
Pricing functionality	Perform pricing management according to the customer groups, price types, pricing methods, and units of measure that make best sense for your business, and publish updated pricing promptly to your customers and trading partners.
Distribution management	Plan and manage picking, packing, loading, shipping, and delivery to meet customer needs and preferences, use your resources conservatively, and keep costs controlled.
Container management	Track all types of containers by status, content, and lots; document their routes and condition; and use the appropriate kind of container for each customer.
Item information lookup	View any item-related information anytime, and configure lookups to present exactly the types of data you need to see.
Catch weights	Take advantage of the catch weight functionality for accurate tracking, costing, and pricing of varying weights.
Dual units of measure	Apply dual units of measure to products, such as packages as well as volume or weight, for accurate pricing, reporting, and inventory-keeping.
Deductions, promotions, and rebates	Record and apply deductions, promotions, and rebates in sync with your finance management practices and in full integration with the general ledger in Microsoft Dynamics NAV.
NAV Anywhere integration	Perform planned or ad-hoc warehouse transactions on your preferred mobile device, such as movements, picking, shipping, receiving, put-away, and others.
